NOARK Electric Introduction

NOARK Electric is a global electrical producer and forms a part of an international concern with more than 25 thousands of employees. Regional centers in Shanghai, Prague and Chicago drive business in each continent. Our mission is to bring a new opportunity and unrivalled customer care to the global low voltage market.

We are determined to go further into the world market and establish and maintain strong relationships with customers. NOARK Electric cares about different areas in a local way to meet the unique requirements of each market. For this reason, our worldwide business activities are coordinated locally in the individual areas.

NOARK Electric has invested millions of Euros in development and it is equipped with the most up-to-date technologies and production facilities. The intelligent low voltage distribution and control product lines with high quality, performance and stability were developed by our highly professional and skilled R&D team.

The first generation Ex9 series of intelligent low voltage electrical products, incorporating the latest design, electronic and simulation technologies, reach even the top industry expectations. This product series not only set multiple functions into ever smaller size, but includes also data acquisition, communications, and intelligent remote control modules, which reward NOARK Electric with up to tens of exclusive patents including invention, practical application and design. We firmly adhere to the concept of „best products are derived from best raw materials“, which is also the principle of our production. It is realized by cooperating with qualified suppliers with a very high selection standard. Besides complying with all compulsory domestic law requirements, full range of products is accredited by CB/CCA organizations based on up-to-date IEC and EN standards. NOARK Electric also takes care of local certifications to meet special requirements and habits of particular markets. Besides concentration on the product related technical issues, NOARK Electric cares about nature and closely follows the environmental policies.

Through global sales network, NOARK Electric has successfully contributed its efforts to provide high-efficient, high-reliable, high-intelligent and energy-saving low voltage products for reasonable prices to sophisticated industry areas, such as power distribution, smart grids, renewable energy, petrochemical industry, machinery manufacturing, real estate and construction.

We believe,

Remarkable technical innovations bring reliable products!

Advanced technical ideas create intelligent electrical apparatus for the future!

We are new opportunity for you!

NOARK Electric Introduction

Top-level technological facilities

General Information

NOARK products sales comply with the laws of the respective country and is regulated by general trading conditions, a framework agreement or by other contracts between NOARK Electric Europe s.r.o. or its subsidiary and the customer.

Goods price is defined by the respective valid official price list of the NOARK Electric Company and by the contractual conditions of the respective customer. If not negotiated otherwise, purchase price includes neither expenses for transport, transport wrapping, expanses connected with goods handling, with the installation and implementing into operation, nor expanses connected with disposal or recycling of the goods or the wrapping, if valid laws do not impose different obligation.

The NOARK Electric Company provides its products with a five-year European warranty. It may be applied outside the country where the product is bought. In this case it is submitted in a local subsidiary of NOARK Electric. Warranty conditions are described in detail in the NOARK Electric complaint procedure.

Miniature Circuit Breakers Ex9BH, 10 kA

- **Miniature Circuit Breakers according to IEC / EN 60898-1**
- **Rated short circuit breaking capacity I_{cn} 10 kA**
- **1 up to 4-pole versions**
- **Tripping characteristics B, C, D**
- **Rated current up to 63 A**
- **Rated operational voltage 230/400 V AC, 48 V DC (per pole)**
- **Wide range of accessories**
- **Toggle colour according to rated current I_n**

Ex9BH miniature circuit breakers are suitable for domestic as well as industrial applications. They can be combined with wide range of accessories including auxiliary and signal contacts, shunt trip release, undervoltage and overvoltage release or RCD add-on block. It is possible to create diversed combination of accessories. These combinations are only limited by total number, not by the type of accessories - all components fit together. It can be used up to three units of auxiliary or alarm contacts plus up to two units for release units.

Miniature Circuit Breakers Ex9BN, 6 kA

- **Miniature Circuit Breakers according to IEC / EN 60898-1**
- **Rated short circuit breaking capacity I_{cn} 6 kA**
- **1 up to 4-pole versions**
- **Tripping characteristics B, C, D**
- **Rated current up to 63 A**
- **Rated operational voltage 230/400 V AC, 48 V DC (per pole)**
- **Wide range of accessories**

Ex9BN miniature circuit breakers are suitable for domestic as well as industrial applications. They can be combined with wide range of accessories including auxiliary and signal contacts, shunt trip release, undervoltage and overvoltage release or RCD add-on block. It is possible to create diversed combination of accessories. These combinations are only limited by total number, not by the type of accessories - all components fit together. It can be used up to three units of auxiliary or alarm contacts plus up to two units for release units.

Accessories

Auxiliary or signal contacts **AX, AL, AXL** Up to 3 units	Voltage or trip releases **SHT, UVT, OVT** Up to 2 units	MCB **Ex9B** 1, 1+N, 2, 3, 3+N, 4-pole	RCD add-on block **Ex9LE** 1+N, 2, 3, 3+N, 4-pole

Auxiliary contacts AX3111, AX3122	see page 72
Alarm contact AL3111	see page 72
Auxiliary and alarm contact AXL31	see page 72
Shunt trip releases SHT31, SHT3111	see page 72
Undervoltage releases UVT31, UVT3101, UVT3110	see page 73
Overvoltage release OVT31	see page 73
RCD add-on blocks Ex9LE	see page 65

RCD add-on blocks are mounted to the MCBs Ex9B from the right, the other accessories from the left and are identical for devices of the line Ex9B and Ex9PN.

Miniature Circuit Breakers Ex9B125

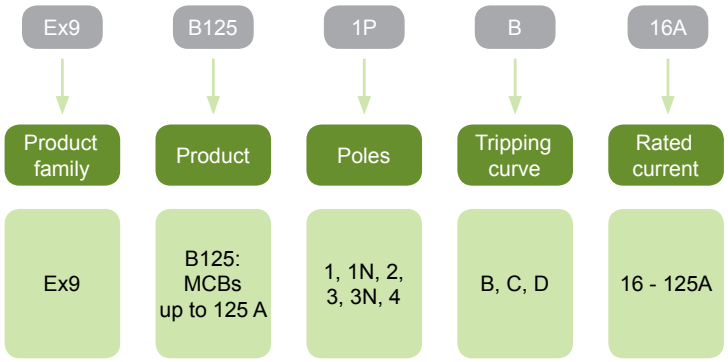

- **Miniature Circuit Breakers up to 125 A**
- **Tested according to EN 60947-2**
- **High rated breaking capacities:**
  up to 25 kA acc. to EN 60947-2
  up to 20 kA acc. to EN 60898-1
- **1 up to 4-pole versions**
- **Rated operating voltage 230/400 V AC**
- **Tripping characteristics B, C, D according to EN 60898-1**
- **Wide range of accessories**
- **Toggle colour according to rated current I_n**

Miniature Circuit Breakers Ex9B125 are suitable mainly for power distribution and industrial applications for short-circuit and overload current protection with rated current up to 125 A and very high rated breaking capacities (tested according to EN 60947-2 as well as EN 60898-1).

These breakers can be combined with wide range of accessories (same as for Ex9B breakers) including auxiliary and signal contacts, shunt trip releases, undervoltage and overvoltage releases. It is possible to create diversed combination of accessories.

B-Characteristic

- Rated ultimate short-circuit breaking capacity I_{cu} (EN 60947-2)
  for I_n 16 - 63 A = 25 kA
  for I_n 80, 100 A = 20 kA
  for I_n 125 A = 15 kA
- Rated short-circuit breaking capacity I_{cn} (EN 60898-1)
  for I_n 16 - 63 A = 20 kA
  for I_n 80, 100 A = 15 kA
  for I_n 125 A = 10 kA

Miniature Circuit Breakers Ex9PN-N

- **Miniature Circuit Breakers according to IEC / EN 60898-1**
- **1+N pole MCB in one module design**
- **Rated short circuit breaking capacity I_{cn} 6 kA**
- **Tripping characteristics B, C**
- **Rated current up to 40 A**
- **Rated operational voltage 230/400 V AC, 48 V DC (per pole)**
- **Wide range of accessories**

Ex9PN-N miniature circuit breakers are suitable for domestic as well as industrial applications. They can be combined with wide range of accessories including auxiliary and signal contacts, shunt trip release, undervoltage and overvoltage release. It is possible to create diversed combination of accessories. These combinations are only limited by total number, not by the type of accessories - all components fit together. It can be used up to three units of auxiliary or alarm contacts plus up to two units for release units.

DC Miniature Circuit Breakers Ex9BD

- **General purpose DC Miniature Circuit Breakers**
- **Tested according to IEC / EN 60947-2**
- **Rated operating voltage U_e 220 V DC per pole**
- **Rated current 1 up to 63 A**
- **Rated short circuit breaking capacity I_{cu} 10 kA**
- **1 and 2 pole versions**
- **Tripping characteristics C, K**
- **Wide range of accessories**

General purpose DC Miniature Circuit Breakers Ex9BD are designed for general direct current aplications. Due to their polarity dependece it is necessary to respect the polarity of the current.

For applications with varying polarity, as e.g. Photovoltaic, please use PV MCB line Ex9BP (see Catalogue of Photovoltaic Components).

Isolators Ex9I125

- **Modular Isolators**
- **Rated current up to 125 A**
- **Rated voltage 230 / 400 V AC**
- **Rated short-time withstand current I_{cw} = 12 x I_e, 1 s**
- **Meet requirements of IEC / EN 60947-3**
- **Built-in lock mechanism for OFF position**
- **1 up to 4-pole version**

Isolators Ex9I125 can be used as a main switch in wide variety of applications. These switches are tested according to IEC / EN 60947-3 standards and fulfill also requirements for isolation function.

Utilization category AC-22A ensures possibility of switching mixed resistive and inductive loads with low overloads with cos φ = 0.65. Subcategory A allows frequent operation.

Isolators of line Ex9I125 are produced in modular design with width one module unit per pole. Can be connected via standard busbars of both fork as well as pin type of connection.

RCCBs Ex9CL-H/-100, 10 kA

- **Residual Current Circuit Breakers according to IEC / EN 61008-1**
- **Conditional rated short circuit strength I_{nc} 10 kA**
- **2 and 4-pole versions**
- **Rated residual current 30, 100, 300 mA**
- **Rated current up to 100 A**
- **Rated operational voltage 230/400 V AC**
- **AC, A, S and S+A types**
- **Signaling of electrical tripping**

Ex9CL-H and Ex9CL-100 residual current circuit breakers are suitable for domestic as well as industrial applications. They are based on permanent magnet principle. It brings the advantage of Voltage independent function. Adequate voltage is only necessary when testing of the RCCB with the T test button. Magnetic RCCBs should be tested regularly with a period of one month.

RCCBs Ex9CL-N, 6 kA

- **Residual Current Circuit Breakers according to IEC / EN 61008-1**
- **Conditional rated short circuit strength I_{nc} 6 kA**
- **2 and 4-pole versions**
- **Rated residual current 30, 300 mA**
- **Rated current up to 63 A**
- **Rated operational voltage 230/400 V AC**
- **AC type**
- **Signaling of electrical tripping**

Ex9CL-N residual current circuit breakers are suitable mainly for domestic applications. They are based on permanent magnet principle. It brings the advantage of Voltage independent function. Adequate voltage is only necessary when testing of the RCCB with the T test button. Magnetic RCCBs should be tested regularly with a period of one month.

6 kA variant of the Ex9CL-N residual current circuit breaker is intended mainly for low demanding application like basic protection in household installations.

RCBOs Ex9CBL-H, 10 kA

- **Residual Current Breakers with Overload protection according to IEC / EN 61009**
- **Rated breaking capacity I_{cn} 10 kA**
- **1+N-pole version**
- **Rated residual current 30, 100, 300 mA**
- **Rated currents up to 40 A**
- **Rated operational voltage 230 V AC**
- **Tripping characteristics of installed circuit breaker B and C**
- **AC and A type of RCD**
- **2-module width**

Ex9CBL residual current circuit breakers are suitable for domestic as well as industrial applications. They are based on combination of residual current device with permanent magnet principle and circuit breaker with thermal overload release and magnetic short circuit current release. It brings the advantage of Voltage independent function of the residual current device. Adequate voltage is only necessary when testing of the RCD with the T test button. Magnetic RCDs should be tested regularly with a period of one month.

RCBOs Ex9CBL-N, 6 kA

- **Residual Current Breakers with Overload protection according to IEC / EN 61009**
- **Rated breaking capacity I_{cn} 6 kA**
- **1+N-pole version**
- **Rated residual current 30, 100, 300 mA**
- **Rated currents up to 40 A**
- **Rated operational voltage 230 V AC**
- **Tripping characteristics of installed circuit breaker B and C**
- **AC and A type of RCD**
- **2-module width**

Ex9CBL residual current circuit breakers are suitable for domestic as well as industrial applications. They are based on combination of residual current device with permanent magnet principle and circuit breaker with thermal overload release and magnetic short circuit current release. It brings the advantage of Voltage independent function of the residual current device. Adequate voltage is only necessary when testing of the RCD with the T test button. Magnetic RCDs should be tested regularly with a period of one month.

RCD add-on blocks Ex9LE

- **Residual Current add-on blocks according to IEC / EN 61009**
- **For combination with MCBs Ex9B**
- **Conditional rated short circuit strength I_{nc} 10 kA in combination with Ex9BH and 6 kA with Ex9BN**
- **1+N up to 4-pole versions**
- **Rated residual current 10, 30, 100, 300 mA**
- **Rated currents up to 40 and 63 A**
- **Rated operational voltage 230/400 V AC**
- **AC type of RCD**

Ex9LE residual current add-on blocks are suitable for domestic as well as industrial applications. They are based on electronic technology. It brings advantages of more accurate measuring of residual current and, as a consequence, reduction of unwanted tripping. (For possible use of this device, local legal requirements and conditions must be fulfilled.) These devices also do not suffer with magnetization of the tripping unit. Thus, regular testing is not necessary to preserve function of the device.To fulfill predescribed mandatory testing given by the product standard, it is recommended to test the device regularly with a period of one year.

Given pole version of the RCD add-on block must be combined with MCB of line Ex9B in the following way. 1+N-pole version of RCD add-on block is possible to combine with 1-pole MCB; 2-pole RCD block with 1+N or 2-pole MCB; 3-pole and 3+N-pole RCD block with 3-pole MCB, 4-pole RCD block with 3+N or 4-pole MCB. These variants enable to create very various combinations to obtain special devices with RCBO functionality.

Accessories for Ex9B and Ex9PN

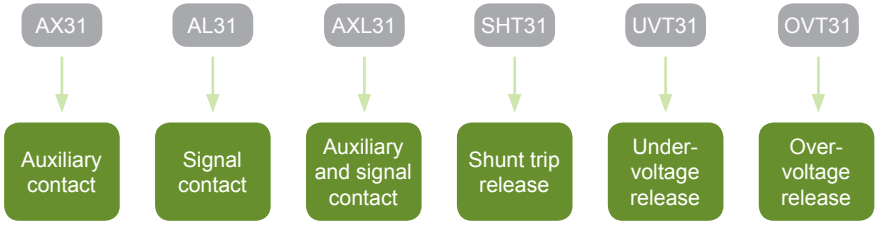

- **Accessories for installation devices Ex9B and Ex9PN**
- **Auxiliary contacts synchronous with main contacts of the device**
- **Signal contacts active on electrical tripping of the circuit breaker (tripping signal contacts)**
- **Shunt trip releases**
- **Undervoltage releases**
- **Overvoltage release**
- **According to EN 60947-1 and EN 60947-5-1**

Accessories is designed in the way to be possible to combine different types with one installation device. It can be used up to two releases plus up to three units of auxiliary or signal contacts (two units in case of AX3122 with two pairs of contacts) plus one unit of RCD-block (only for Ex9B MCBs).

Release units are mounted from the left to the installation device.

Auxiliary and signal contact units to be mounted from the left to the device or to the release unit(s) when installed. Contact units are equipped with changeover (CO) combination(s) of contacts.

- **Accessories for RCBOs line Ex9CBL**
- **Tested according to IEC / EN 60947-5**
- **Mounted from left side**
- **Shunt trip releases**
- **Undervoltage releases**

Accessories is designed in the way to be possible to combine different types of releases with one RCBO. It can be used up to two releases with one RCBO.

Shunt trip release SHTC31 can be used for remote switch off function, undervoltage release UVTC31 to switch connected device off in case of voltage drop.

Release units are mounted from the left side to the RCBO.

Surge Protection Devices Ex9UE

- **Surge Protection Devices**
- **Type 1+2 (Class I+II, T1+T2, B+C)**
  Type 2 (Class II, T2, C)
- **Tested according to EN 61643-11**
- **Maximum continuous operational voltage U_c 275 V up to 440 V AC**
- **Versions with 1+0, 1+1, 2+0, 3+0, 3+1 and 4+0 connection**
- **Plug-in module design**
- **With and without remote indication contact**
- **Device status indicator**

Surge protection devices Ex9UE are used as a protection of electrical installations against transient overvoltage and indirect lightning strokes. These SPDs are designed and certified according to EN 61643-11.

Indication unit helps users to know the status of device and remote-signal port is able to provide remote indication and alarm.

Plug-in module design makes it convenient to change used module without device disconnection.

Installation relays Ex9CH20

- **Installation relays Ex9CH20**
- **Meet requirements of IEC / EN 61095**
- **Rated current up to 20 A**
- **Control coil voltage 24, 230 or 240 V AC**
- **Rated frequency 50/60 Hz**
- **2 or 4-contact versions**
- **Various contact combinations**

Modular relays Ex9CH20 are suitable for household and building modular distribution boards. They are mainly used in building automation processes for switching and controlling lightings, heating systems, ventilations, pumps, heating pumps and other applications.

Optical indicator on the front side indicates status of the contacts and voltage on control coil.

Installation contactors Ex9CH

- **Installation contactors Ex9CH**
- **Meet requirements of IEC / EN 61095**
- **Rated current up to 25, 40, 63 A**
- **Control coil voltage 24, 230 or 240 V AC**
- **Rated frequency 50/60 Hz**
- **2 or 4-contact versions**
- **Various contact combinations**

Modular contactors Ex9CH are suitable for household and building modular distribution boards. They are mainly used in building automation processes for switching and controlling lightings, heating systems, ventilations, pumps, heating pumps and other applications.

Optical indicator on the front side indicates status of the contacts and voltage on control coil.

Change-Over Switches Ex9BT

- **Modular Change-Over Switches**
- **Meet requirements of EN 60669-1**
- **Rated current 16 and 32 A**
- **Rated operating voltage 230/400 V AC**
- **With and without independent LED signal lamp**
- **LED rated voltage 48 or 230 V AC/DC**
- **1 up to 4-pole versions**
- **Various contact combinations**

Installation switches and change-over switches Ex9BT for switching of auxiliary, control, measuring and other circuits.

Variants with NO, NC and CO contacts. Basic versions with only NO contacts are equipped with toggle in green colour. Types with only NC contacts are delivered with red toggles. All other variants are designed with neutral black toggle.

Besides versions with switch function only, there are available also variants where combined switch and signal lamp in one devices. The signal lamps have separate circuit independent on the contact ones. The colour of used LED is white.

Signal lamps Ex9PD

- **Installation Signal Lamps**
- **Meet requirements of IEC / EN 60947-5-1**
- **LED technology**
- **Rated operating voltage 6.3 to 230 V AC/DC**
- **Width 1 MU**
- **1 and 2-LED versions**
- **Various colours and colour combinations**

Installation signal lamps Ex9PD are designed and tested according to standard IEC/EN 60947-5-1. They are based on LED technology and suitable e.g. for circuit status indication.

There are available versions with rated operating voltage from 6.3 up to 230 V AC/DC, with 1 and 2 LEDs in various colours and also all combinations of LED colours in double lamp devices to cover all possible applications.

Analogue Time Switches Ex9TA

- **Installation Analogue Time Switches**
- **Operating voltage U_e 230 V AC**
- **Quartz or grid synchrounous time basis**
- **Daily program of integrated time switch**
- **Shortest switching time 30 min.**
- **1 or 3-module width versions**

Installation Analogue Time Switches Ex9TA are suitable for residential and industrial applications. They will find their use everywhere where it is needed to save energy costs and to switch the circuit in regular daily cycles. Shortest switching time is 30 minutes.

Time switches are offered in 1 or 3-modules width versions with Quartz or grid synchrounous time basis.

- **Weekly and Holiday switching program**
- **Switching status LCD display**
- **Quartz time base**
- **Auto summer and wintertime change**
- **Miniature (1MU) and standard (2MU) width versions**

Installation Digital Time Switches Ex9TD are suitable for time control and switching in various residential and industrial applications. They are fully programmable in every 1 minute and they are working in weekly and holiday switching program.

With these properties, it is possible to set the switching pattern exactly to as required and save energy costs.

These Time Switches are offered in 1MU wide miniature version Ex9TDM and 2MU wide version Ex9TD which is available also with comfort functions as Ex9TDC.

To determine the current status and setting up the time switch each device is equipped with LCD display.

Staircase Switches Ex9SS

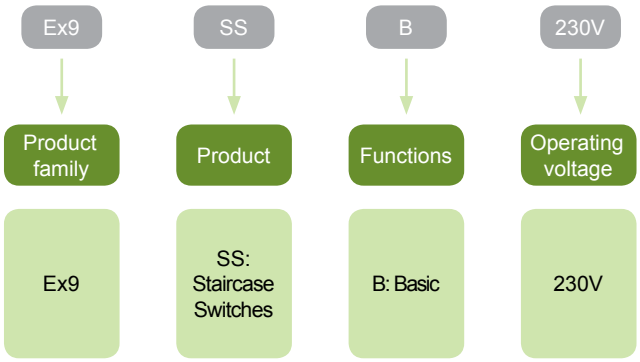

- **Installation Staircase Switches**
- **Rated operating voltage 230 V AC**
- **Switching capacity up to 2300 W**
- **Time adjustment range from 0.5 to 20 min.**
- **Manual control switch**

Installation Staircase Switches Ex9SS are suitable mainly for light switching in many various residential, office and industrial applications, e.g. lighting of staircases or entrance areas.

Their switching time can be adjusted up to 20 minutes using rotary switch on the front side, or they can be manually switched in ON state by the control slider.

Staircase switches

- Time adjustment range from 0.5 to 20 minutes
- Manual control switch
- Switching capacity up to 2300 W
- Automatic recognition of 3 or 4-line connection
- Signal to input during ON status will reset adjusted time
- 100% duty of control circuit

Light Intensity Switches Ex9LA and Ex9LD

- **Light Intensity Switches**
- **Rated operating voltage 230 V AC**
- **Analogue and digital version**
- **With 1 or 2 channels**
- **Without and with integrated time switch**

Light Intensity Switches Ex9LA and Ex9LD are used for light switching according to actual daylight intensity (Ex9LD device also according to time), so the light fixtures are switched only if necessary and it can save money for consumed energy.

Analogue version works with one switching channel. Digital version can work with photoelectric and time switch on 2 channels. This switch can automatically change between summer and wintertime. It operates in weekly switching program and can be connect to light control systems with other devices.

External brightness sensor is included in the scope of delivery.

Residual Current Circuit Breakers, 6 kA

General parameters

Permanent magnet priciple - Voltage independent tripping function
Suitable for household as well as industrial applications
AC type
Magnetic RCCBs should be tested regularly with a period of one month. This is a responsibility of the user of an installaton given by law
In case all wires are not connected at 4-pole RCCB, it is necessary to ensure that circuit of the test button T is supplied with appropriate voltage (by means of mutual connection of respective terminals of the RCCB, see wiring diagram)
Indication of electrical tripping

Technical Data Ex9LE

RCD add-on blocks Ex9LE

General parameters

RCD add-on blocks for combination with miniature cicuit breakers Ex9B
Allow to create various combinations with MCBs with functionality of RCBO
AC type of residual current device
1+N, 2, 3, 3+N and 4-pole versions
Input voltage is connected via MCB
Electronic technology of residual current device - more accurate measuring of residual current, not necessary to test monthly. For possible use of this device, local legal requirements and conditions must be fulfilled.
Recommended testing period one year to fulfill requirements of product standards. Contrary to permanent magnet-based devices, the testing is not necessary to preserve proper sensitivity of the RCD
Given pole version of the RCD add-on block must be combined with MCB Ex9B in the following way. 1+N-pole version of RCD add--on block is possible to combine with 1-pole MCB; 2-pole RCD block with 1+N or 2-pole MCB; 3-pole and 3+N-pole RCD block with 3-pole MCB, 4-pole RCD block with 3+N or 4-pole MCB

Auxiliary and signal contact units AX31, AL31, AXL31

General parameters

With one circuit breaker Ex9B., it can be used up to three contact units with single CO contact or up to two contact units with 2 CO
Contact units can be combined in an arbitrary way
Contact units are mounted to the circuit breaker from the left
In case of installed release unit(s), contact modules are mounted left to the release(s)
Auxiliary contacts synchronous with main contacts of the circuit breaker
Signal contacts active on electrical tripping of the circuit breaker (tripping signal contacts)

With one circuit breaker Ex9B., it can be used up to two units of release (shunt trip, undervoltage, overvoltage)
Release units can be combined in an arbitrary way
Release units are mounted to the circuit breaker from the left
In case of installed contact module(s), release units are mounted left to the breaker, right to the contact unit(s)
Overvoltage release is not a protection against transient overvoltage and does not supersede surge protection devices
To switch connected breaker off in case of increased voltage

3+0 TN-C

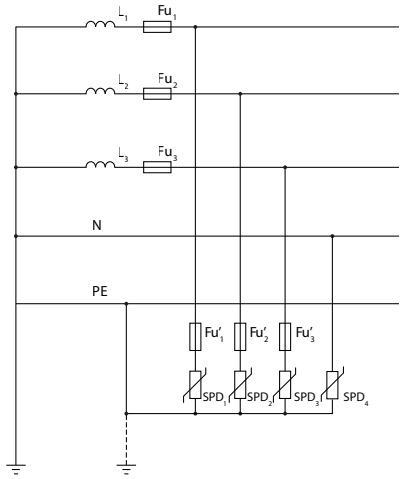

Connection type 3+0 in TN-C system consists of three identical SPDs.

Fu_1-Fu_3 represent main protection (fuses, circuit breaker) in the installation.
In case when Fu_1,Fu_2,Fu_3 > Max. back-up fuse for given SPDs, Fu'_1,Fu'_2,Fu'_3 have to be used. Fu'_1,Fu'_2,Fu'_3 ≤ Max. back-up fuse of the SPDs.

Surge Protection Devices Type 1+2 and Type 2

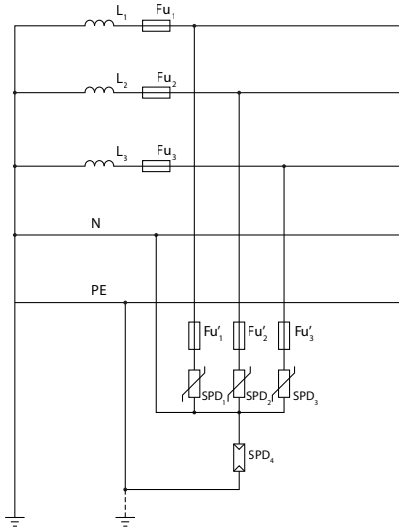

Wiring diagrams

4+0 TN-S

Connection type 4+0 in TN-S system consists of four identical SPDs. This type of connection is suitable mainly to suppress longitudinal type of transient overvoltage, typically caused by atmospheric stroke. The advantages lay in uniform conducting of lightning current from phase and N-conductors. It also effectively protects insulation of conductors suffered with consecutive effects of a lightning stroke. This connection does not provide optimum protection in case transversal overvoltage (typically caused by wanted and unwanted fast switching processes) and thus it is not the best solution for protection of equipment and end consumers. It follows from the fact that residual transversal overvoltage between L and N conductors is given by protection level of two SPDs connected in a series. (e.g. Up of SPD_1+SPD_4 for L_1-N

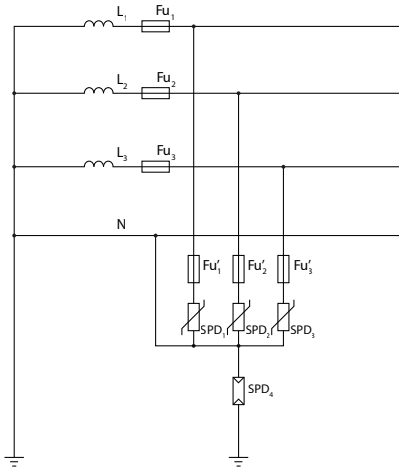

Fu_1-Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when Fu_1,Fu_2,Fu_3 > Max. back-up fuse for given SPDs, Fu'_1,Fu'_2,Fu'_3 have to be used. Fu'_1,Fu'_2,Fu'_3 ≤ Max. back-up fuse of the SPDs.

3+1 TN-S

Connection type 3+1 in TN-S system consists of three identical SPDs and one sum spark gap. It is suitable mainly to suppress transversal type of transient overvoltage, typically caused by wanted and unwanted fast switching processes. Main advantage is minimization of residual transversal overvoltage between L and N, which is defined dominantly by protection level of a single SPD. This diagram is recommended for protection of end consumers in TN-S system. A disadvantage for suppression of atmospheric longitudinal overvoltage follows from non-uniform protection of L and N conductors. When used for protection against longitudinal effects, usually as a protection against lightning stroke current (SPD class I), I_{imp} of sum spark gap SPD_4 must be min. 4 x I_{imp} of SPD_1,SPD_2,SPD_3.

Fu_1-Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when Fu_1,Fu_2,Fu_3 > Max. back-up fuse for given SPDs, Fu'_1,Fu'_2,Fu'_3 have to be used. Fu'_1,Fu'_2,Fu'_3 ≤ Max. back-up fuse of the SPDs.

3+1 TT

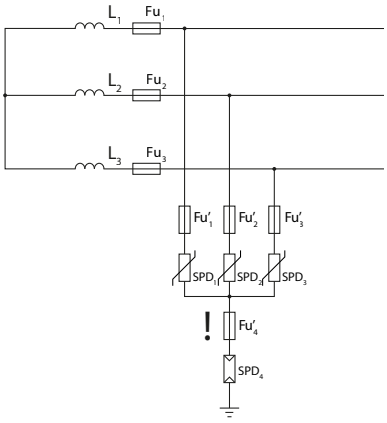

In order to keep insulation status between N conductor and ground potential, connection 3+1 is recommended for TT systems. It provides maximum protection against transversal transient overvoltage and significantly limits longitudinal one.

Fu_1-Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when Fu_1,Fu_2,Fu_3 > Max. back-up fuse for given SPDs, Fu'_1,Fu'_2,Fu'_3 have to be used. Fu'_1,Fu'_2,Fu'_3 ≤ Max. back-up fuse of the SPDs.

Ordering data p. 77

Surge Protection Devices Type 1+2 and Type 2

Wiring diagrams

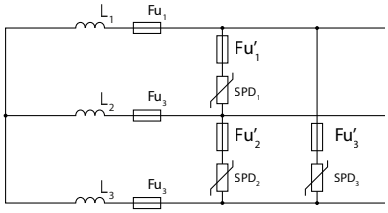

3+1 IT

3+1 connection in IT system is suitable for protection against both transversal as well as longitudinal overvoltage. Due to grounded sum spark gap allows effective reduction of effects caused by lightning currents. Particular SPDs are dimensioned to “phase” voltage of the system (i.e. to 230 V in 230/400V grid). An important difference to 3+1 connection in TN-S system is back up fuse for sum spark gap. This protection has to be used in IT systems. It ensures insulation status in case of spark gap malfunction like uninterrupted follow currents.

Fu_1-Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when Fu_1,Fu_2,Fu_3 > Max. back-up fuse for given SPDs, Fu'_1,Fu'_2,Fu'_3 have to be used. Fu'_1,Fu'_2,Fu'_3 ≤ Max. back-up fuse of the SPDs. Fu'_4 ≤ Max. back up fuse of the sum spark gap SPD_4.

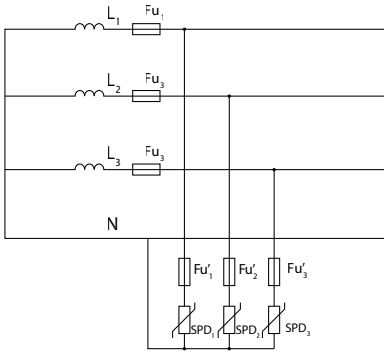

Note: Connection diagram is indicative only. There have to be observed and fulfill potential other requirements, e.g. insulation tests of sum spark gap etc., in actual IT system.

3+0 IT

This type of connection is suitable for protection against transversal overvoltage caused by switching processes. Particular SPDs must be dimensioned for phase--phase voltage.

Fu_1-Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when Fu_1,Fu_2,Fu_3 > Max. back-up fuse for given SPDs (transformed to single phase voltage), Fu'_1,Fu'_2,Fu'_3 have to be used. Fu'_1,Fu'_2,Fu'_3 ≤ Max. back-up fuse of the SPDs.

3+0 local isolated system with N conductor (hospitals, chemical industry, etc.)

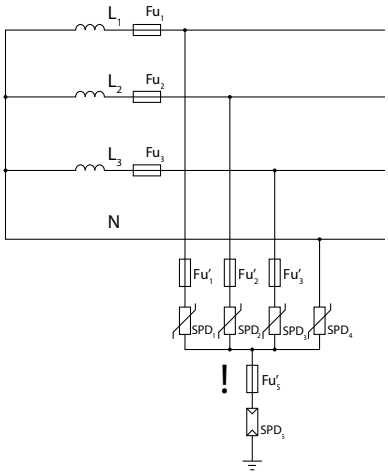

This type of connection is suitable for protection against transversal overvoltage caused by switching processes. Because such system is designed in order to maximize availability of main voltage, there must be assumed first fault in the system as a standard operational regime. Due to this reason, particular SPDs must be dimensioned for phase-phase voltage (i.e. to 400 V in 230/400 V system).

Fu_1-Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when Fu_1,Fu_2,Fu_3 > Max. back-up fuse for given SPDs, Fu'_1,Fu'_2,Fu'_3 have to be used. Fu'_1,Fu'_2,Fu'_3 ≤ Max. back-up fuse of the SPDs.

Ordering data p. 77

Surge Protection Devices Type 1+2 and Type 2

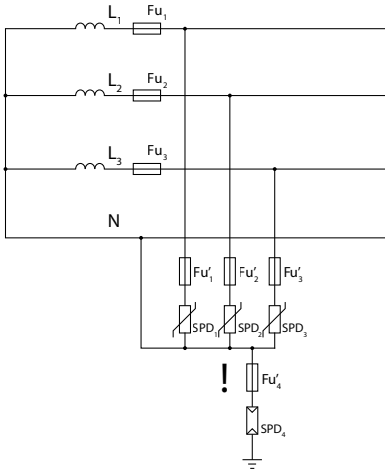

Wiring diagrams

4+1 local isolated with N conductor (hospitals, chemical industry, etc.)

This connection is suitable for limitation of both transversal as well as longitudinal surges. Thanks to SPD_4, it provides much fine and balanced protection of all phase conductors in comparison to connection 3+1. It also more effectively limits phase – phase transversal overvoltage. Particular devices SPD_1-SPD_4 are dimensioned for phase voltage (i.e. to 230 V in 230/400 V system). As in standards IT system, sum spark gap SPD_5 has to be protected with back up fuse to ensure insulation of the system. **Local requirements on the sum spark gap have to be followed in particular applications**.

Fu_1-Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when Fu_1,Fu_2,Fu_3 > Max. back-up fuse for given SPDs, Fu'_1,Fu'_2,Fu'_3 have to be used. Fu'_1,Fu'_2,Fu'_3 ≤ Max. back-up fuse of the SPDs. Fu'_5 ≤ Max. back up fuse of the sum spark gap SPD_5.

3+1 local isolated with N conductor (hospitals, chemical industry, etc.)

Situation is similar to 4+1 connection. Particular devices SPD_1-SPD_3 are dimensioned for phase - phase voltage (i.e. to 400 V in 230/400 V system) not to be overloaded in case of the first, generally non-tripped, fault. This connection is suitable for consumers for which transient overvoltage between phase and N conductors matters most. Sum spark gap SPD_4 has to be protected with back up fuse. **Local requirements on the sum spark gap have to be followed in particular applications**.

Fu_1-Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when Fu_1,Fu_2,Fu_3 > Max. back-up fuse for given SPDs, Fu'_1,Fu'_2,Fu'_3 have to be used. Fu'_1,Fu'_2,Fu'_3 ≤ Max. back-up fuse of the SPDs. Fu'_4 ≤ Max. back up fuse of the sum spark gap SPD_4.
